

LIMPAR Weed brush WD 70**The weed brush for large areas**

The solid frame in connection with the powerful Honda GXV 160 OHV engine, the big wheels and the handlebar allows a vibration-free working over a long time with hardly noticeable lateral forces.

The brushes are individually adjustable. If wear occurs, the brushes can be pushed back by the quick-change system. A wear protection protects the plate damage. A splash guard protect against flying stones and damage. The brush head can be adjusted in the inclination. The handlebar is foldable and stepless height adjustable without tools. Furthermore it can be pivoted to the side.
