

Patch Planer MBP 450

- Front-mounted asphalt planer to suit Multihog CX/MX/MH ranges
- Side shift function allows the operator to plane close to walls, buildings and kerbs
- Operator can control and adjust tilt and side-shift via joystick inside the cabin
- Can be used on both roads and pavements, and an optional rear-mounted water tank can be fitted for added dust suppression
- The planer can be transported from one site to another on the front of the Multihog, saving time and costs
- Low vibration levels within the Multihog eliminates risk of Hand Arm Vibration Syndrome associated with manual road repair methods
- Significantly increases productivity and reduces cost per pothole repair when compared to traditional methods
- Precise planing reduces the quantity of material removed, infill required and associated costs
- Constant alignment with the surface guarantees maximum stability
- Working width is 450 mm (17.7 in) and working depth is 150 mm (6 in)

Due to our policy of continuous improvement, specifications may change subsequent to publication of this sheet.
